Today's businesses depend on technology to survive and stay competitive. That's why you need more than someone to call when something goes wrong.

Your computers, servers, networks, and e-mail keep you connected to clients, vendors, and each other.

So when your systems go down, they take the rest of your business with them.

Your company's success needs all the protection you can give it.

That's why you need the

The logo for Sensei Infrastructure Guardian is presented in three horizontal bands. The top band is dark blue and contains the word "SENSEI" in white, all-caps, sans-serif font. The middle band is green and contains the word "INFRASTRUCTURE" in white, all-caps, sans-serif font. The bottom band is red and contains the word "GUARDIAN" in white, all-caps, sans-serif font.

**SENSEI
INFRASTRUCTURE
GUARDIAN**

This suite of three IT services protects your technology (and your business) from systems failures, real and virtual disasters, and the many dangers that ride into your network on the back of a single piece of e-mail.

Look inside to learn more about how Sensei's solution can keep your systems safe.

Then call us at 703-359-0700, and let us protect you from all threats – foreign, domestic ... and digital.

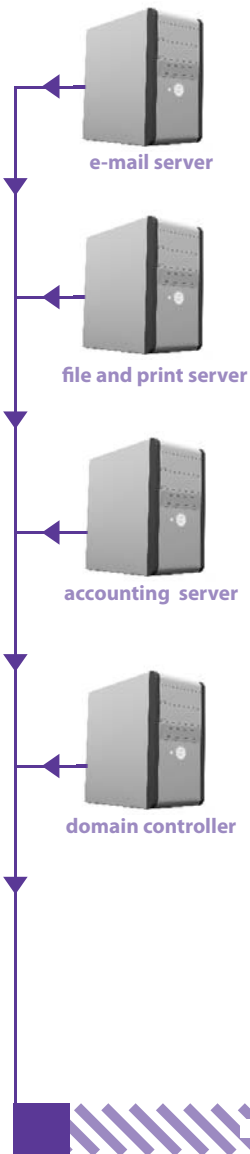

Sensei monitors your servers around the clock, and keeps you informed when things go wrong.

With Sensei watching over your network, our consultants are alerted to a wide range of problems and potential problems with your servers, including hard disk issues, systems error messages, hardware failures, stopped services, and more. Sensei's Infrastructure Guardian monitors your servers, sending alerts back to our consultants if problems are detected.

Sensei's support staff has extensive experience analyzing the alerts sent out by the monitored devices, so they can determine which alerts are critical and can respond accordingly. Many issues are resolved without you ever realizing there was an issue. Under Sensei's watchful eye, you'll identify most problems before they have a major business impact, and lower your IT costs by scheduling downtime and repairs in advance instead of needing emergency service when important components stop working.

Sensei's 24/7 monitoring service provides:

- 24/7 Monitoring of Server Health
- Alert Analysis
- Monitoring of Server Services
- Monitoring of Low Disk Space Conditions
- Weekly Review of Backup Logs
- Monthly Installation of Security Patches
- Monitoring of Storage Array Health
- Monthly Audit to Identify Potentially Vulnerable Computers *
- Semi-annual Installation of Available Server BIOS and Firmware Updates
- Advanced Notifications of Server Warranty Renewals
- Tracking of Domain Name Expirations
- Tracking of Software Licenses and Renewal Status

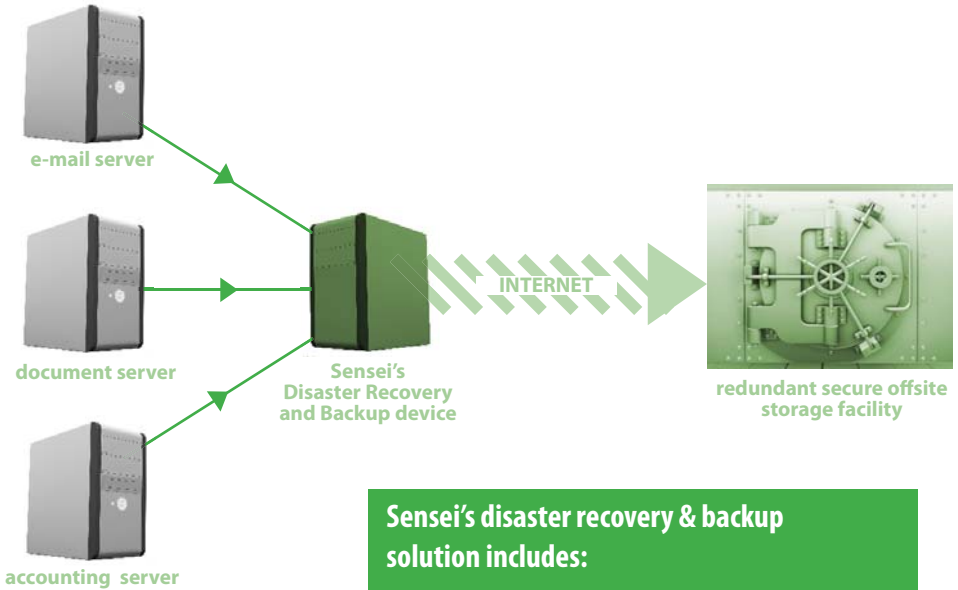

DISASTER RECOVERY & BACKUP

With Sensei's disaster recovery and backup service, your data and your business are protected from disasters, both natural and man-made.

How safe is your company's data? Would your business survive a fire, tornado, hurricane, earthquake or even a simple server hardware failure? With proper planning and Sensei's backup and recovery solution as part of your company's technology infrastructure, the answer is yes.

Sensei provides a superior disaster recovery and backup solution that matches the needs of both your business and your budget. It avoids the problems traditional backup systems face by adding a single disaster recovery and backup device to your company's network. This device can be configured to take snapshots of all the data on your servers at regular intervals to provide better recovery point objectives. Then, if the need arises, Sensei's business continuity solution can restore server operations quickly using advanced virtualization tools. This functionality also provides fast recovery of files and e-mails.

Because Sensei's solution is a system connected directly to the network, it completely eliminates the need for tape or traditional USB disk backups. The contents of your backup system are copied periodically to a remote facility in an encrypted form, ensuring offsite storage of business-critical information.

Sensei's disaster recovery & backup solution includes:

- System Snapshots Taken at Regular Intervals
- Server Virtualization of Failed Server(s)
- Simultaneous Backup of Multiple Servers
- Offsite and Secure Storage of Data
- Hardware Warranty and Maintenance
- Monitoring of Backup Status

With Sensei's e-mail security and filtering service, your message traffic is both protected and screened to keep your systems safe.

Powered by Postini, Sensei's inbound and outbound e-mail security solution is highly effective and easy to implement and use. It's always running and always up-to-date, keeping viruses and spam away from your IT resources.

Sensei provides effective and reliable protection for your e-mail at all times by leveraging a patented, on-demand architecture to block spam, phishing, viruses, and other e-mail threats before they reach your e-mail servers, lightening the load on your IT infrastructure and improving performance.

Because Sensei's e-mail security and filtering solution exists outside your local network, there is no hardware or software to install and maintain. There's no need for the constant patching and updates that are required by other appliance or software solutions.

In addition, your end-users can manage their own message quarantines and settings through a web-based interface that's easy to learn and use. E-mail recipients can inspect their quarantined message in a summary e-mail, and choose to deliver only the ones they know are safe. They can also modify their spam protection settings to their own preferred levels. All of these end-user controls are configured by your organization's e-mail policy administrator, giving management complete control over what end-users can change.

With Sensei's e-mail security & filtering solution, you can:

- Reduce spam, viruses, phishing, denial of service (DoS), directory harvest attacks (DHA), and other attacks
- Filter out all messaging threats including spam and viruses BEFORE they reach your network
- Allow end users to manage their own spam in an efficient manner
- Set what end users can and cannot change through the Administrative Console Message Center
- Create content-based policies for inbound and outbound traffic
- Have your e-mail spooled by our filtering service in the event your mail server fails. Your e-mail will be forwarded to your server once it comes back online
- Implement quickly, with no hardware or software to install

About Sensei Enterprises, Inc.

Sensei Enterprises, Inc. provides experienced information technology support and computer forensics to more than 220 law firms and businesses in Virginia, Washington, D.C., and Maryland.

Founded in 1997, the company has grown to include a staff of experienced technology professionals, all with a proven track record of excellence in IT support as well as electronic evidence recovery, analysis, and expert testimony.

Sensei's founders, Sharon D. Nelson, Esq. and John W. Simek, are acknowledged experts in the field, and are often on the road educating audiences across the country about technology issues for law firms and businesses.

They have also written articles about technology and the law for many publications, and even co-authored a number of books, including *The Electronic Evidence and Discovery Handbook* (ABA, 2006); *Information Security for Lawyers and Law Firms* (ABA, 2006); and *The 2009 Solo and Small Firm Legal Technology Guide: Critical Decisions Made Simple* (ABA, 2009).
